

LOCKER LINK™ NETWORKED ELECTRONIC LOCKER SYSTEM

Patent Pending

Locker Link™ Self-Service Kiosk and Wristband System for Lockers

The Locker Link™ System from Smarte Carte® is a fun and easy locker solution for your guests that lets them buy one wristband at a self-service kiosk and use it at different lockers throughout your property all day!

Guests can choose the Locker Link wristband that best suits their need: use a variety of ride or attraction lockers throughout the park, use an all-day locker, or combine both types of locker use on one wristband.

The new Locker Link wristband system provides ultimate flexibility for your guests: wristbands can be selected so that multiple people in a large group can each wear a band and share

the same lockers; the Locker Link kiosk can be configured to accept payment from credit cards, private label cards, bills, or to read barcode coupons.

The wristbands can be used with Smarte Locke® 1000 series electronic lockers with barcode access points. Kiosks and locker stations can be placed throughout the property to best accommodate traffic flow patterns and maximize locker revenue.

The Locker Link system is available through our popular concession program, where Smarte Carte provides the kiosk and lockers at no cost, maintains and manages the equipment, and shares the revenue with you.

LOCKER LINK™ SELF-SERVICE KIOSK AND WRISTBAND SYSTEM FOR LOCKERS

Kiosk

- Self-service kiosk can be configured to accept payment from credit cards, private label cards, bills, or to read barcode coupons. Change-making is available when bills are used.
- Wristband dispenser can be programmed to dispense all of one kind of band, or various bands from one kiosk. Up to three band formats are available from one kiosk.
- Easy-to-use, interactive color touch screen display.

Locker Link kiosk can be configured to accept credit cards, private label cards, bills, or to read barcode coupons.

Lockers

- The Locker Link wristband system works with Smarte Locke® 1000 series electronic lockers configured for barcode.
- Lockers can be configured for one-time entry, multiple re-entry throughout the day, and blocked usage of a second locker by a guest if they already have one in use.

Locker Link works with Smarte Locke® 1000 series electronic lockers configured for barcode.

Data

- Kiosk and lockers are internet-connected to central servers, allowing for real-time access to usage data, wristband outage information, and locker rental volumes.
- Robust reporting from lockers and kiosks helps manage inventory, pricing, and traffic to optimize equipment placements.
- Detailed information about payment methods, coupon redemption, season pass holder use, and other key criteria help maximize program effectiveness.
