

MAGIC TOUCH™ 3000 SERIES BIOMETRIC LOCKERS

*smarte*locke®

With the touch of a finger, travelers enjoy the freedom and security of electronic locker technology.

Smarte Locke® electronic lockers are the newest evolution in electronic locker technology. The keyless system captures the fingerprint of the locker renter and requires a fingerprint match to reopen the locker door, ensuring that *only* the person who rented the locker can open the locker door to remove its contents. Travelers can be confident their belongings are protected from unauthorized entry.

Smarte Locke's Security Management System further ensures a maximum level of security with features such as remote surveillance of

all locker activity, automated reporting, active door alarms and system-wide emergency door opening or lock-down.

The rental station includes a touch-screen display that allows customers to choose their payment option and provides simple step-by-step operating instructions.

Smarte Locke electronic lockers are available through our popular concession program where Smarte Carte provides the lockers at no cost to you and maintains and manages the service – and we share the revenue with you!

MAGIC TOUCH™ SL3 BIOMETRIC LOCKERS

- Keyless system utilizes biometric fingerprint recognition to authorize locker rental and reentry. The locker number and a computer-generated access code are also required for reentry.
- The fingerprint recognition technology utilized by Smarte Carte has an unmatched ability to recognize even the hardest to read fingerprints and provides false accept and false reject rates of less than 1%.
- Lockers can be inspected daily and contents are subject to random security searches.
- Computerized system provides the ability to detect and enforce overdue lockers. Locker rental is limited to 48 hours. Items left in a locker longer than 48 hours are removed by Smarte Carte.
- Lockers include an active alarm system on every door and optional audible alarm for maximum security.
- Security Management System allows the operator to monitor locker activity from any rental station or from their office via a host PC. Monitoring capabilities include a history log of all locker activity, report generation, self-diagnostics for servicing and the ability to open or lock down all locker doors within seconds in an emergency.
- Accepts bills, coins/tokens, credit cards or private label cards and returns change.
- Touch-screen display provides instructions in 12 languages.

To rent a locker, travelers place any finger on the optical scan device at the locker rental station.

A valid scan must be captured before access to a locker is permitted. The scan provides a fingerprint that the system stores.

When the traveler returns to reopen the locker, the system requires another scan to identify the traveler before authorizing access to the locker and its contents.

SPECIFICATIONS

Rental station:	Height: 76 inches Width: 17.7 inches Depth: 17.7 inches	Communication:	Telephone or LAN connections required for credit card capability and the Security Management System host PC.
